PROJECTS

- Smart Code Assistant CLI:** [Link](#)
Developed an AI-powered developer assistant that provides in-project solutions with commands for code debugging, optimization, explanation, and test generation. Integrated the Ollama 3.2B LLM for fully offline functionality and successfully published the tool on PyPI.
- Multi-Class Plant Leaf Disease Detection using CNN:** [Link](#)
A deep learning model that detects plant diseases from leaf images with 95% accuracy, trained on a dataset of approximately 87,000 RGB images of healthy and diseased crop leaves, categorized into 38 classes. Farmers can upload a leaf photo to instantly identify the disease and receive treatment recommendations, helping protect crops and reduce losses. The app is lightweight and works offline, making it accessible in areas with limited internet connectivity.
- MarkIt:** [Link](#)
A Chrome extension enabling one click webpage highlighting with features to save, organize, and export highlights for research, learning, and content creation. Supports real time highlight management and offline PDF export. Achieved a 5 star rating on Microsoft Edge Add-ons.
